## Offshore Exhibitions

We look forward to welcoming you at our stand at WindEnergy 2017 in London and a week later in Southampton at the Seawork exhibition.

Meet us in  
London at  
stand N-C74

---

Meet us in  
Southampton  
13 - 15 June  
at stand PY91

### **Expansion doubles up**

We have added 3,500 square meters to our production area and thereby doubled the total number. The expansion is a result of the significant increase in the number of employees along with orders we have witnessed during 2016. At the same time, we welcome the expansion as the extra square meters make it even easier to handle the large fenders. On top of this, we can certainly say that we are ready for any task you might have for us!

### **RG Seasight Fenders equips the entire fleet for Seacat Services**

Seacat Services ordered their first fender from RG Seasight Fenders in 2012. Today they have 14 vessels all equipped with fenders from the Danish fender company.

Managing Director at Seacat Services, Ian Baylis, is quite satisfied with the cooperation with RG Seasight Fenders and states:

- Very often plans change for our fleet; suddenly we will get an unexpected charter that requires a modification or a period of bad weather to facilitate a last minute fender change. We have found that these are the situations where RG Seasight Fenders

excels as a supplier. There is a solid understanding of our operational challenges and a mind-set to get the job done.
