

# RG SEASIGHT FENDERS

- a part of RG Group

## The positivity in the industry was obvious at the two offshore exhibitions in June

Seawork definitely was the icing on the cake after two exciting weeks in the UK at the Offshore Wind Energy exhibition in London followed by Seawork in Southampton.

We had many visitors at our stand during both of the exhibitions, which gave us a fantastic opportunity to feel the mood within the offshore industry. First of all, it was great to hear all the good news from the shipping companies and to feel the positivity among the owners. Many of their vessels are out on charters, and some companies are even building new vessels. Secondly, we got quite a lot of feedback on our fender systems, which is indispensable to us.

Thank you all for two great exhibitions and for all the interest and feedback you have given us.

---

### UMOE Rapid

The newly build UMOE Rapid is solely equipped with our fenders as we have manufactured both the front and side fenders. We congratulate UMOE Mandal AS with their new vessel, UMOE Rapid, and wish the vessel together with the crew “fair winds and following seas”.

---

### Seacat Services Enterprise

Seacat Services also presented a new vessel at the Seawork exhibition, the Seacat Services Enterprise.

The new vessel is no exception from the rest of the Seacat Services fleet when it comes to fender systems, as you also find our fender at the Enterprise. We wish Seacat Services and crew “wind at your back” and congratulate them on the new vessel.
